

# FIDEL ANYANWU

COMPUTER SCIENCE | FULL-STACK APPLICATIONS | DATABASES | IT SYSTEMS

Lake Charles, LA • (337) 249-9136 • fanyanwu@mcneese.edu • LinkedIn • Portfolio

## CAREER PROFILE

Computer Science senior graduating December 2026 with hands-on experience across full-stack development, client-side web applications, relational databases, Windows/Active Directory labs, software testing, and technical support. Builds with JavaScript, TypeScript, Next.js, React, SQL/T-SQL, Supabase, Django REST, Git/GitHub, and Vercel. Experience also includes supporting 30+ students as a programming Teaching Assistant, testing robotics prototypes in a university research lab, and supporting a residence hall community of 50+ students.

## EDUCATION

**Bachelor of Science in Computer Science** | McNeese State University

Expected Dec 2026

Lake Charles, LA | GPA: 3.50/4.00

## TECHNICAL SKILLS

**Languages & Scripting:** Python; JavaScript; TypeScript; C; SQL; T-SQL; HTML; CSS; Bash/Shell scripting

**Web & Application Development:** Next.js; React; Django REST; responsive web design; DOM manipulation; forms; REST APIs; server routes; JSON; localStorage; Supabase authentication and saved records

**Database & Data:** Microsoft SQL Server; SSMS; Supabase; relational design; normalization; joins; constraints; primary/foreign keys; schema design; CSV loading; data validation

**Systems & Tools:** Windows Server; Active Directory; DNS/DNSSEC; Group Policy; Linux/Unix fundamentals; Git; GitHub; Docker; Vercel; VS Code; browser developer tools; Microsoft Office

**Engineering Practices:** Software testing; debugging; requirements gathering; SDLC; technical documentation; deployment checks; user support

## PROFESSIONAL EXPERIENCE

**Teaching Assistant – McNeese State University**

Aug 2023 – May 2024

*Department of Computing | Lake Charles, LA*

- Led weekly JavaScript/HTML programming labs for 30+ students, reproducing errors, tracing program flow, identifying syntax and logic issues, and testing fixes instead of simply giving students the answer.
- Guided students through a browser-based Tetris project using arrays, game loops, keyboard events, collision detection, row clearing, scoring, and DOM rendering to connect multiple programming concepts in one application.
- Reviewed and graded 100+ programming assignments by executing code, comparing expected and actual output, evaluating logic and structure, and giving specific written and verbal feedback.
- Adjusted explanations for students with different experience levels, strengthening practical communication, mentoring, troubleshooting, and user-support skills in a technical environment.

**Lab Research Assistant – McNeese Department of Computing and Engineering**

Aug 2023 – May 2024

*Academic & Computing Center | Lake Charles, LA*

- Constructed and tested robotics prototypes by connecting sensors and hardware, checking wiring, calibrating components, and comparing motion and sensor response across repeated test runs.
- Troubleshot inconsistent prototype behavior by isolating components and determining whether issues came from mechanical setup, sensor readings, wiring, or control logic before retesting controlled changes.
- Documented test results and design changes so the research team could compare iterations, track recurring problems, and identify adjustments that improved reliability.
- Presented prototype functionality and the testing process to 50+ attendees during McNeese Engineering Week, explaining technical challenges in accessible language.

**Resident Assistant – McNeese State University Housing**

Aug 2024 – Present

*Lake Charles, LA*

- Serve as a first point of contact for 50+ residents, responding to housing questions, maintenance concerns, campus-resource needs, roommate conflicts, policy matters, and incident follow-up.
- Mediate roommate and policy-related concerns by hearing both sides, clarifying expectations, documenting outcomes, and referring cases to professional Housing staff when additional action is needed.
- Coordinate room checks, duty coverage, resident follow-ups, community programs, and administrative documentation while maintaining a full-time academic course load.

## SELECTED TECHNICAL PROJECTS

**SnapChef – AI Food Image Assistant**

2026

*Independent Full-Stack Web Project | Next.js, React, TypeScript, Supabase*

- Built a full-stack application that sends an uploaded food image through a server-side Gemini or OpenAI API and returns the likely dish, ingredients, recipe steps, nutritional information, safety tips, substitutions, estimated shopping, and video search.
- Implemented Supabase authentication and saved scan history, plus preferences, grocery-list copying, recipe sharing/downloading, dish renaming, loading/error states, and fallback behavior when no AI API key is configured.
- Structured the interface around upload, processing, and results states so users can move from a food image to organized recipe information without one crowded response screen.

## SignalDesk – Incident Response Workspace

2026

*Independent Web Project | Next.js, React, TypeScript, Server Routes, Status APIs*

- Built an incident-response workspace for documenting product issues by service, owner, severity, customer impact, location, risk, and response status across command, guidance, response, coverage, public-signal, and reporting views.
- Created server-side routes to assess incident information and normalize public signals from GitHub, Vercel, and Cloudflare, with responsive client-side filters and status views for desktop and mobile.

## Campus Connect – Student Networking Platform

2026

*McNeese State University | CSCI 426 Web Development | HTML, CSS, JavaScript, localStorage*

- Built an interconnected student platform covering registration, dashboards, profiles, tutor discovery and reviews, events, groups, messaging, resources, maps, skill exchange, and administrative views.
- Used JavaScript and browser localStorage to simulate account data, login state, profiles, RSVPs, tutor reviews, search and filters, and personalized client-side actions without a backend.
- Created responsive desktop and mobile layouts, accessible form labels, reusable interface patterns, and a drawer-based mobile navigation experience.

## TechCore Solutions Database System

2024–2025

*McNeese State University | CSCI 309 Database Group Project | SQL Server, T-SQL, Python*

- Designed SQL Server tables for clients, employees, addresses, roles, services, and categories using primary/foreign keys, constraints, bridge tables, and normalized relationships.
- Wrote and tested T-SQL SELECT, JOIN, WHERE, and GROUP BY queries; generated CSV test records with Python; bulk-loaded data; and debugged data type, constraint, and result-set issues.

## CowboysBookstore – Team Online Bookstore

2025

*Collaborative Course Project | Django REST, React, TypeScript, JWT, Docker*

- Worked on a collaborative bookstore system with a Django REST backend, React/TypeScript frontend, JWT authentication endpoints, Docker configuration, CI validation, and a testing framework.
- Created workflow diagrams for registration, search, cart, checkout, sessions, and administration, and documented measurable requirements for response time, inactivity, backup, and checkout reliability.

## Windows & Active Directory Administration Labs

2025–2026

*McNeese State University | CSCI 486 Systems Coursework | Windows Server, AD, DNS, Group Policy*

- Configured Windows Server and Active Directory labs using Organizational Units, users, groups, permissions, delegation, DNS, Active Directory-integrated zones, and DNSSEC-related settings.
- Developed and tested Group Policy settings for loopback processing, restricted groups, ADMX templates, and NRPT, and used Repadmin to validate replication behavior and troubleshoot configuration issues.

## LEADERSHIP & CAMPUS INVOLVEMENT

### Finance Zone Chair – National Society of Black Engineers (NSBE)

2024 – Present

- Support sponsorship outreach, fundraising, scholarship development, and financial coordination for professional-development events, McHacks, TORCH, and other chapter programs.
- Prepare sponsor-facing funding proposals that connect event needs, budget priorities, student impact, and what the chapter can offer prospective partners.

### Treasurer – African and Caribbean Student Association

2023 – 2024

- Supported budgeting and financial organization for cultural events and student programs, tracked event expenses and funding needs, and coordinated planning details with executive-board members.

### Secretary – Robotics Club

2022 – Present

- Maintain meeting updates and club communication while supporting robotics activities, technical project coordination, competition preparation, testing, and troubleshooting.
- Contributed to a team-built VEX robot that earned 1st Place in the 2023 Engineering Week Expo competition.

## ADDITIONAL PROJECT PORTFOLIO

**StudyOps:** Built a browser-based study command center for files, notes, tasks, flashcards, quizzes, backup export/import, and Panic Mode planning using JavaScript and localStorage.

**FortunatoCare:** Built responsive doctor-profile, hospital-service, and appointment-request pages with JavaScript form handling, structured content, and dynamic page updates.

**FitNex:** Created workout logging, goal-setting, and progress-tracking interactions using JavaScript-driven forms and interface updates.

**Tetris:** Implemented browser game logic for keyboard controls, tetromino movement and rotation, collision detection, row clearing, score tracking, and real-time game-state updates.

**Arcane Duel:** Built a JavaScript combat game with player controls, health and damage logic, win/loss conditions, and a computer-controlled opponent with level-based difficulty.

## HONORS, PRESENTATIONS & SERVICE

- Presidential List – McNeese State University.
- McNeese MCHacks – 2nd Place; collaborative technical problem-solving and project development in a hackathon environment.
- VEX Robotics Competition – 1st Place, 2023 Engineering Week Expo.
- Engineering Week Robotics Presentation – Presented prototype functionality, testing, motion/sensor behavior, and technical challenges to 50+ attendees.
- NSBE Technical Outreach and Community Help (TORCH) – STEM outreach and community-focused service.
